The Sun is the star at the centre of the Solar system. It is made of hydrogen and helium, and in the core hydrogen is converted to helium by nuclear fusion, generating the heat and light radiated by the Sun. Out of the 9 Grahas, the Sun is by far the biggest, and all the others revolve around the Sun, held in orbit by the gravitational pull of the Sun. The Sun is largely responsible for upholding life on earth, by supplying heat and light. The energy of the Sun is often released suddenly through solar flares (sudden discharges of high-energy radiation and atomic particles) and Prominences (huge flares of gas erupting from the surface of the Sun).

Moon

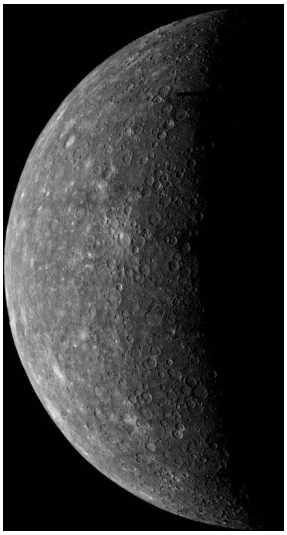

The origin of the Moon is still a subject of some scientific debate, but the most accepted theory is that the Moon was formed of the debris from a massive collision with the young Earth about 4.6 billion years ago. The Moon's gravitational influence upon the Earth is the primary cause of ocean tides. In fact, the Moon has more than twice the effect upon tides than does the Sun. The Moon makes one rotation and completes a revolution around the Earth every 27 days, 7 hours, and 3 minutes. This synchronous rotation is caused by an uneven distribution of mass in the Moon (essentially, it is "heavier" on one side than the other) and has allowed the Earth's gravity to keep one side of the Moon permanently facing Earth. The Moon has no atmosphere; without an atmosphere, the Moon has nothing to protect it from meteorite impacts, and thus the surface of the Moon is covered with impact craters, both large and small.

Mars is the first planet outside the orbit of the Earth. It holds only a thin atmosphere, which is transparent, so there is a clear view of Mars' surface. Occasionally there are dust storms, which spread over most of the planet, hiding its surface completely. The poles have ice caps (made of water and carbon dioxide). The surface of Mars is rocky, and the characteristic red color of Mars comes from the iron oxide dust which covers large areas. Mars has the highest craters of any planet in the solar system. There is strong evidence from the landscape that in the past Mars had water in liquid form. The rotation period of Mars is just like the Earth, and its axis has a similar tilt. Like Mercury, its orbit is decidedly eccentric.

Mercury is the closest to the Sun, in the range of 46 to 70 million km. It moves faster than any other planet, completing a full orbit in less than 88 days. Mercury is also the smallest, and has the greatest density. The planet rotates around its axis very slowly, taking almost 59 days for one rotation (only Venus is slower). Mercury is rocky, with virtually no atmoshere. Most of the surface is heavily cratered by the impact of meteorites. Some areas are less cratered. Mercury has ray-craters, a type not found on the Moon, which give a characteristic look to the planet. The core of Mercury is most likely of iron. Mercury gets very hot on the sunlit side, upto 430° C, and very cold on the dark side, down to –183° C

Jupiter is the largest planet is the solar system, bigger than all the other planets combined. It's composition is similar to the Sun – it's main constituent is hydrogen, but unlike the Sun, Jupiter has a small rocky core. There is no distinct surface, because it is made up of gas, and is merged with gaseous atmosphere. Because Jupiter spins around so quickly (one rotation takes only 10 hours), the atmosphere is in constant turmoil, forming ever-changing belts and zones that encircle the planet parallel to the equator.

Venus is the brightest object in the sky except for the Sun and the Moon. Since Venus is an inferior planet, it shows phases when viewed with a telescope from the perspective of Earth. Venus' orbit is the most nearly circular of that of any planet, with an eccentricity of less than 1%. Venus' rotation is somewhat unusual in that it is both very slow (243 Earth days per Venus day, slightly longer than Venus' year) and retrograde. Venus is only slightly smaller than Earth (95% of Earth's diameter, 80% of Earth's mass). Venus has thick layers of clouds composed mostly of carbon dioxide. These clouds completely obscure our view surface and produce a run-away greenhouse effect that makes Venus' surface temperature hot enough to melt lead. Most of Venus' surface consists of gently rolling plains with little relief.

Saturn is the second largest planet in the solar system; only Jupiter is larger. Like Jupiter, Saturn is a giant ball of gas with no solid surface beneath its clouds. The colorful clouds of Saturn (and Jupiter) are composed of ammonia ice crystals. Saturn's atmosphere above the clouds is approximately 96% hydrogen and 4% helium. Winds near Saturn's equator blow toward the east at 500 m/s (1100 mi/hr). Saturn has a volume 764 times that of Earth, but weighs only 95 times as much. Saturn is the only planet in the solar system less dense than water : it would float! Saturn has a larger ring system and more known moons (18) than any other planet.

Results of Mangala Dosha

Mangala Dosha effects the married life of a person in many ways – it creates delays, cheating, hurdles and obstacles in getting married. After marriage physical, mental or financial hardship for one of the partners or both the partners. It causes mutual disputes, allegations and counter allegations and may even lead to disintegration of marriage. If Dosha is pronounced, one of the partners may remain ill or there may be untimely death of either one or both the partners.

Inspite of this one should not be scared of Mangala Dosha. Efforts should be made for a person having Mangala dosha to marry another person with Mangala dosha because when the dosha is similar, it gets nullified and the couple leads a happy married life.

दम्पत्योर्जन्मकाले व्ययधनहिबुके सप्तमे लग्नरन्ध्रे । लग्नाच्चन्द्राच्च शुक्रादपि भवति यदा भूमिपुत्रो द्वयोर्वै ॥
तत्साम्यात्पुत्रमित्रप्रचुरधनपतां दंपती दीर्घ-काला । जीवेतामेकहा न भवति मश्तिरिति प्राहुरत्रात्रिमुख्या: ॥

In the horoscope of both the bride and the groom, if Mars is placed in the second, fourth, seventh, eighth or twelfth house from the Lagna, the Moon or Venus, then due to equality, Mangala dosha is nullified. One attains mutual happiness, wealth, children, health and friends.

कुज दोष वत्ती देया कुजदोषवते किल। नास्ति दोषो न चानिष्टं दम्पत्यो सुखवर्धनम्।।झ

If a girl having Mangala dosha is married to a boy with Mangala dosha, the dosha is cancelled and there will be mutual happiness.

Remedies to Repel Mangala Dosha

To ward off the effects of Mangala Dosha following are recommended –

• One should fast on Tuesdays (sunrise to next day sunrise). During the day consume liquid drinks without salt like tea, coffee, milk, fruit juice and curd. In the evening, draw a triangle with red kumkum (roli) on a plate and worship with Panchopachara [red sandalwood, red flowers, incense (dhoop), lighted lamp and food consecrated to a deity]. Thereafter, only before sunset, one may consume wheat bread, ghee and jaggery (unrefined cane sugar).

• If the Mangalik Dosha is pronounced then the Mangala Chandika Strotra should be recited daily for 21 times for 108 consecutive days. In the morning hours one should sit facing the eastern direction, light a five stroked lamp and worship one's deity (Ishta) and the planet Mars (Mangala) with Panchopachara and then recite the following –

रक्ष रक्ष जगन्मातर्देवि मंगलचंडिके । हारिके विपदां राशे हर्षमंगलकारिके ॥
हर्षमंगलदक्षे च हर्षमंगलदायिके । शुभे मंगलदक्षे च शुभे मंगलचंडिके ॥
मंगले मंगलार्हे च सर्वमंगलमंगले । सदा मंगलदे देवि सर्वेषां मंगलालये ॥

Cancellation of Mangala Dosha
between Catherine Sue Colvin and Catherine Sue Colvin

As per astrological classics, Mangala Dosha cannot be cancelled entirely, only its intensity can be reduced. Under special circumstances, Mangala Dosha is automatically nullified or reduced to a minimum.

• In the Horoscope of Catherine Sue Colvin and Catherine Sue Colvin, there is no Mangala Dosha.
